Medical and Practice Management

Connect Your Practices

a MEDITECH company

Medical and Practice Management (MPM) is a robust suite of physician practice management and electronic health record tools designed to streamline and automate all aspects of provider and clinic workflow. MPM optimizes the seamless sharing of information among physician practices and clinics as well as with the affiliated hospitals and health care organizations utilizing MEDITECH's Health Care Information System. The result is one integrated record for each patient across the continuum of care that greatly enhances patient safety and quality of care.

Product Features

Physician Desktop

The physician desktop provides physicians, nurses and other clinical staff a central access point for their daily routines, regardless of whether they are signing in from the clinic, hospital, emergency room, or home office. From here, physicians may access their office schedules, manage their prioritized tasks, review lab and radiology results, process patient correspondence and electronically sign completed documentation.

Integrated Ambulatory EHR

The MPM Electronic Health Record helps caregivers efficiently document patient care using flexible documentation tools and standard as well as customizable templates. Within the electronic chart review, caregivers are able to track important historical patient data from across the health care enterprise, including all hospital, emergency room, outpatient and home care visits.

Electronic Prescribing & Ordering

From one centralized order entry screen, clinicians safely and efficiently order prescriptions, diagnostic procedures, referrals and other patient orders with the aid of powerful decision-support tools, including drug interaction and contraindication checking, medical necessity checks, ambulatory order sets, weight-based dosing, e-prescribing functionality and other helpful alerts.

Provider & Resource Scheduling

Robust scheduling tools provide the capability to book patient appointments for one specific location or any location across the entire enterprise (in the hospital or other associated clinics) from one application, streamlining the scheduling process while reducing scheduling errors and missed appointments.

Practice Billing & Receivables

Patient and insurance bills are automatically created through the collection of clinical data, eliminating redundant data entry and streamlining the billing process. Features include full line-item posting, customized patient statements, electronic claims & remittance, automated collections functionality and extensive standard and site-specific reporting.

Patient Portal

The Patient Portal provides patients with an intuitive, secure, web-based method of access to portions of their medical records through your organization's website. The portal accommodates various levels of access to health records and offers a mechanism for secure communications between patients and their care providers.

LSS Data Systems
& MEDITECH

Your Integrated
**Electronic Health
Record**

Relax.
It's all there.

One Integrated Record

Quality care results from the right data at the right time acted upon the right way. Medical and Practice Management's (MPM) full integration with MEDITECH's Health Care Information System enables you and your providers to build robust electronic health records for your patients that contain data from across your health care enterprise: From hospital and acute care settings, physician practices, outpatient clinics, the emergency department and home health care. Care data from all of these sources is aggregated into one global patient record, presented to you and your clinicians in an ambulatory-centric fashion.

MPM also supports an expanding number of HL7 compliant interoperability solutions to exchange clinical, financial and administrative data. MPM supports the Continuity of Care Document (CCD) in order to exchange patient medical summaries within a Health Information Exchange (HIE) network. MPM includes the ability to import electronic documents through robust scanning and electronic file management tools. The MPM tools will support your organizational goals to create a patient-centric electronic health record.

If your goal is one electronic medical record for each patient from across your enterprise and beyond, Medical and Practice Management is the right solution for you. It's more than interoperability. It's integration.

Putting Patient Care Back in the Center

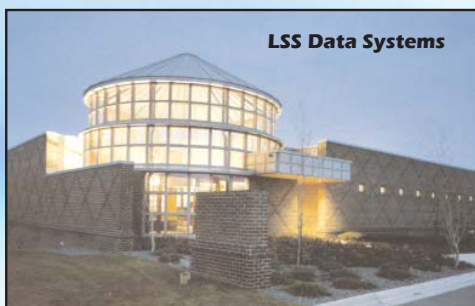

The seamless integration of all components of MPM into your MEDITECH HCIS provides benefits not only to clinicians and health care organizations, but ultimately to patients by creating rich, detailed, enterprise-accessible patient records that ensure quality of care across the care continuum. The benefits of enterprise-wide integration include:

- Aggregation of patient medical record data from across the enterprise and beyond
- Ready access to data from the inpatient, outpatient, emergency room and practice settings
- Enterprise-wide drug interaction and contraindication checking
- Common order management processes
- Consistent provider interface and screen navigation conventions for clinicians in all care settings

A Tradition of Collaboration

MEDITECH and LSS Data Systems have worked together for more than 27 years in an effort to support health care organizations and physician practices with the strongest software solutions available in the industry. We share common backgrounds, philosophies and approaches to technology.

Customers benefit from our unique combination of expertise in providing systems oriented toward the needs of physician practices and health care enterprises. And by utilizing an identical technology platform, data can be safely and easily shared between MEDITECH and LSS applications. This configuration moves LSS and MEDITECH beyond traditional interfacing to a completely integrated, seamless solution for hospital-affiliated clinics and physician practices.
