

## MPM Patient Record

The Patient Record is an online patient clinical record designed from a provider's perspective. From one logically-designed and easy-to-use screen, health care providers can quickly view a detailed profile of the patient's pertinent medical information from multiple care settings. Full details of clinic, hospital, and emergency visits and associated data are also accessible for review. In addition, it facilitates patient management for on-call and covering providers, allowing access to ambulatory records across the continuum of care and enabling users to quickly familiarize themselves with patients not regularly under their care.

Documentation Tool

### Components & Benefits

Clinicians are able to increase productivity and improve patient safety by utilizing the following features:

- Flexible documentation routines
- Health maintenance and disease management features and notifications
- Seamless integration with LSS and MEDITECH modules
- Unique and flexible reporting options
- Single-click access to enterprise health information
- Automated capture of billing charges during clinical documentation
- Personal health information available to patients via the Patient Portal

### Effective Care Monitoring

The Patient Record allows health care providers to efficiently track:

- Medical problems
- Medications
- Allergies
- Surgeries
- Immunizations
- Laboratory and Radiology results and images
- Referrals
- Progress notes
- Family, social and personal medical history
- Health maintenance and disease management

### Care Documentation

The documentation process helps to increase the speed of provider workflow by automatically generating a provider-specific progress note as patient visits are processed. Other features that help streamline documentation include:

- Flexible documentation methods such as standard and customizable templates, image annotation, dictation and transcription, handwriting recognition and voice recognition
- Keyboard navigation
- Compatibility with wireless pen tablets
- Automated E/M Coding assistance tool
- Ability to document multiple patient complaints in a single progress note

### Integrated Patient Portal

The Patient Record seamlessly integrates with a secure, web-based Patient Portal to safely send and receive patient information, such as:

- Medical history
- Appointment detail
- Patient financial information (including option for online bill pay)

\*See Patient Portal brief for more information

### Automated Flow of Billing Data

The MPM Suite takes a bold new approach to physician billing and practice management by unifying clinical and billing functions while streamlining the data collection process. The Patient Record automatically creates the patient bill during the collection of clinical data, eliminating the need for redundant entry of billing information by seamlessly passing billing data directly to the Physician Billing and Receivables module.
