

## INDIGO OVERVIEW

As hospitals are pressed to reduce costs, improve quality and demonstrate effective use of EHR data as part of new ARRA HITECH legislation; having access to performance metrics and being able to draw timely conclusions is critical to operational success. Yet most hospitals struggle to pull together reporting metrics, expending significant resources to generate static views and scorecards.

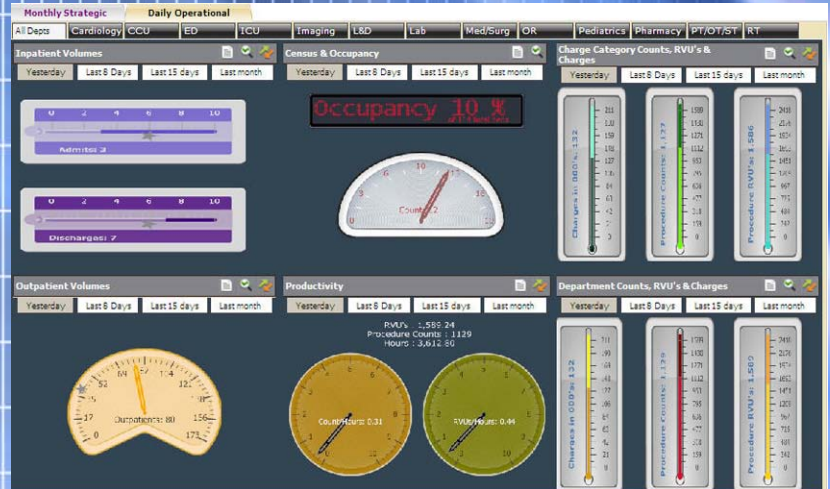

IndiGo brings new life to your MEDITECH data converting your information into timely and meaningful business intelligence and presenting it to users in easy to understand scorecards and dashboards. With IndiGo, you will always know where you stand against your Key Performance Indicators (KPI). IndiGo is fully integrated with Medisolv's ENCOR product to bring Core Measure Indicator data into your IndiGo Scorecards on a daily basis as abstraction is completed.

By directly utilizing a hospital's existing data, IndiGo automates the creation, management and distribution of predefined daily operational dashboards and indicators while providing the ability to develop your own indicators. Indicators include:

- Joint Commission (JCAHO) Core Measures
- Patient Safety Indicators from Agency for Healthcare Research and Quality (AHRQ)
- Inpatient Quality Indicators from Agency for Healthcare Research and Quality (AHRQ)
- Key Financial Indicators
- Hospital-specific Custom Indicators

## DASHBOARDS & SCORECARDS

IndiGo supports both Daily Dashboards and Strategic Scorecards. Stunning graphics and Intelligent color coding allow hospital staff to Quickly identify and focus on operational issues and KPI's in need of immediate attention. With IndiGo hospitals can finally concentrate on actual performance improvement actions rather than information gathering.

## KEY FEATURES

Enterprise wide sharing of KPI information in a timely and cost efficient manner is another one of IndiGo's essential features. Sharing this information within the hospital is necessary to effectively bring about positive change.

IndiGo facilitates information sharing through single click access to the following functions:

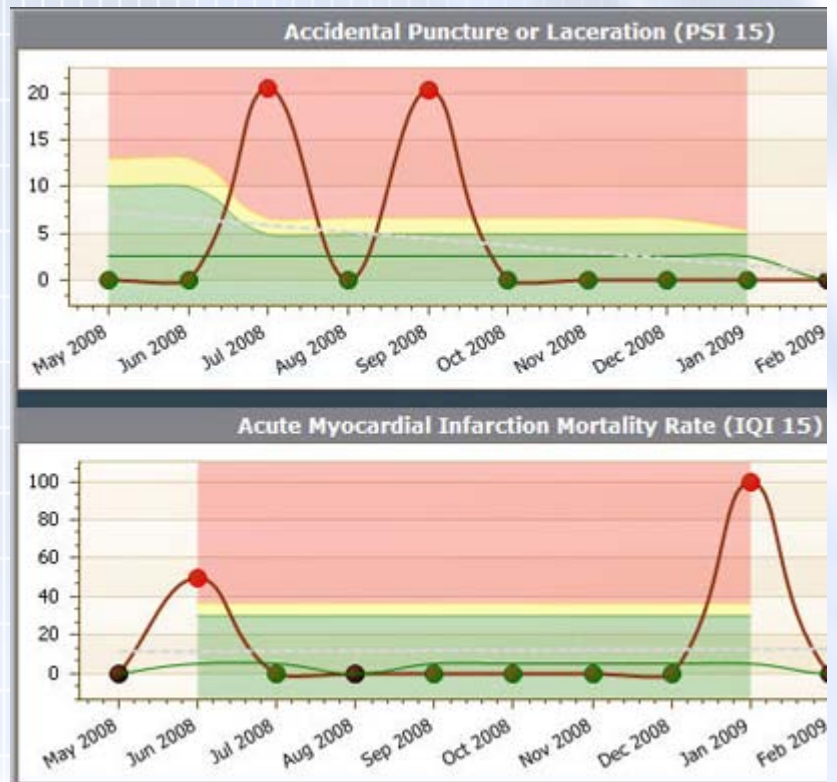

- Save report outputs for later retrieval
- Email reports to specific users
- Automatically generate scheduled reports
- Publish reports to groups of users
- Export reports to Excel, Word or PDF

IndiGo goal tracking tools allow hospitals to define their own goals for any KPI of interest within the application. IndiGo thus becomes a central repository not only for all KPI data but also for management goals by specific indicators. Measuring the overall health of the hospital has never been easier.

IndiGo KPI reports allow drill down to the patient and individual transaction level from the indicator summary result. Clinical and financial information available from the visit drill down provide information for chart audits.

Product deployment on the Intranet, using existing IT infrastructure and standard Web browsers, creates a true enterprise wide distribution system. Hospitals with a Data Repository already in place can realize IndiGo benefits very quickly due to a very short implementation cycle. IndiGo is designed specifically for hospitals as a comprehensive yet cost effective Indicator based performance management system.
