

HEALTHCARE BUSINESS INTELLIGENCE

Hospitals are under pressure to reduce costs, improve quality and prove regulatory compliance. These demands and shifts toward pay for performance (P4P) dictate that managers have access to near real-time performance metrics to enable rapid yet informed decision making. Gathering and processing this information is time consuming, often resulting in reports that are too late for timely corrective action.

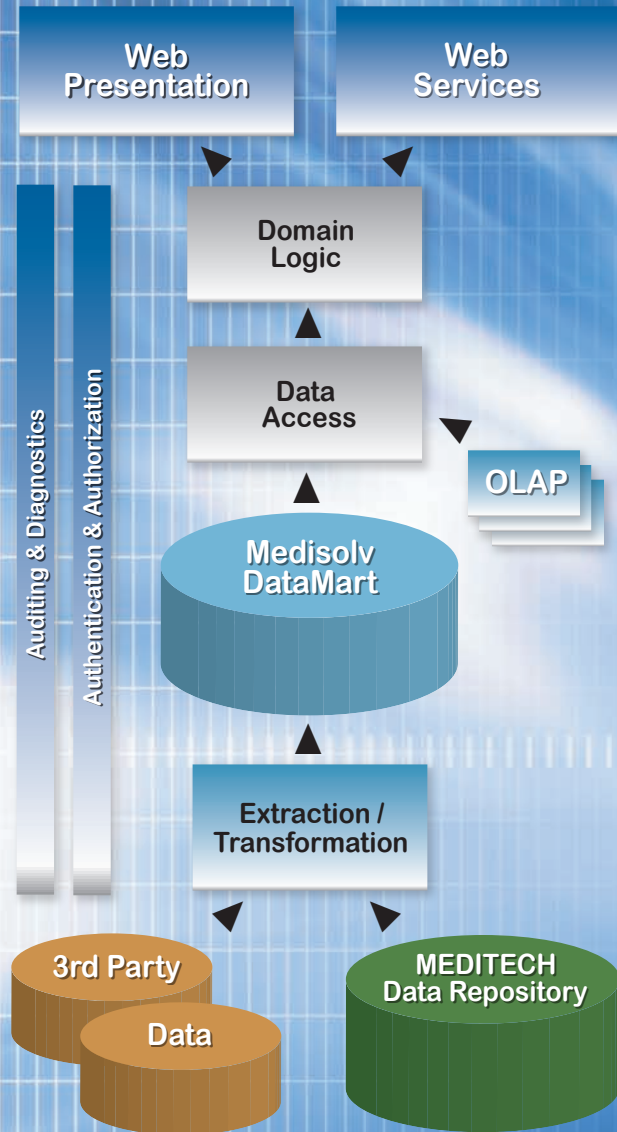

Medisolv RAPID and IndiGo software applications were built as a robust platform to provide near real-time Business Intelligence and Decision Support capabilities for the MEDITECH Data Repository. Proactive hospital management is finally here.

How Medisolv Works

Data from MEDITECH modules is extracted to the MEDITECH Data Repository usually on a near continuous basis. Medisolv Data Transfer Services (DTS) move elements from MEDITECH DR and external data sources into Data Marts optimized for reporting. Medisolv end user tools embedded with proprietary business logic allow non technical users to query this data for clinical and financial decision making. With the system:

- Users are authenticated and authorized using roles based security
- Audit & diagnostics trails are maintained
- Access is provided to a large library of predefined clinical and financial reporting content
- Ad Hoc reports can be generated from MEDITECH or non MEDITECH data leveraging seamless integration with Microsoft Reporting Services.
- Internet Explorer is used as a client to view reports minimizing deployment resources.

Product Summary

RAPID comes with a large number of predefined modules and views covering:

- Administration
- Finance
- Providers
- Human Resources
- Clinical
- Patient Safety
- Quality
- Utilization Management
- Market and Customer Analysis

IndiGo provides Scorecards and Dashboards with Pre-defined Key Performance Indicators including:

- Financial Indicators
- CMS core measures
- JCAHO quality indicators
- AHRQ quality indicators

Both products offer extensive customization options through:

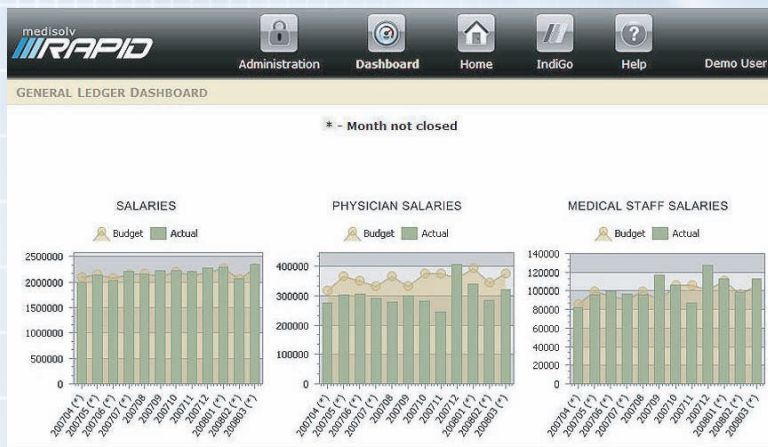

- Slicing and dicing of data with three dimensional OLAP cubes
- Ad Hoc reporting using Microsoft Reporting Services
- Building your own Key Performance Indicators with the Indicator Builder tools
- Importing non-MEDITECH data

Key Advantages of Medisolv

As a MEDITECH Business Partner, Medisolv has invested significant resources in the development of pre-defined reports, dashboards, and scorecards and will continue to enhance these products in the future. In the end, you can gain more strategic benefit from your investment in MEDITECH DR by:

- Reducing hospital staffing needs for reports generation
- Enabling timely reporting and near real time performance monitoring to improve executive decision making
- Permitting managers to dive directly to the patient and transaction level detail from the summary level for more effective operational management.
