

Document Imaging and Scanning Conversion

As MEDITECH customers transition to MEDITECH Scanning and Archiving (SCA), a number of migration factors will need to be considered. MEDITECH

hospitals have years' worth of data stored in document imaging systems, and they are converting to MEDITECH's SCA solution because it is tightly integrated with the entire MEDITECH system.

Choose an effective strategy

MEDITECH customers using other scanning and archiving products are considering strategies for maintaining access to their scanned and archived images. Forward Advantage and its partner, Infinity Healthcare Solutions, provide the necessary conversion tool, components and services for MEDITECH customers who want to convert their existing imaging and scanning system information to the MEDITECH SCA system. Conversion (import) routines, provided by MEDITECH, are used to enable this functionality.

Benefit from an efficient process

Data conversions from Blue Chip and Valco, as well as images from other third-party vendors, are included. All image data relevant for import into MEDITECH will be extracted from the existing system, and will be converted to the standard import format supported by MEDITECH.

During the execution process, all files will be migrated from a non-Windows® file system to a Windows file system if necessary. Services include:

- Installation of all required components
- Configuration of the conversion tool
- Execution of the tool as needed for:
 - Format Tests
 - Full Test Run
 - Go-Live
 - Post-Live Cleanup
- Execution of the MEDITECH Scanning Conversion Routines
- Post run error checking and guidance of any site-related changes needed
- Status calls as needed
