MEDITECH has joined forces with Spectrum Medical’s Anesthesia Information Management System (AIMS) to create a suite of anesthesia interfaces. The exchange of critical patient information between Spectrum Medical and MEDITECH’s 6.15+ EHR bridges the clinical gap within the continuum of care, especially within the perioperative process.

Integration between Spectrum Medical’s inherent device connectivity solution and MEDITECH’s comprehensive EHR can help your team deliver improved patient care, safety, and outcomes. In addition, workflow automation, increased charge capture, and time-saving processes can potentially provide your organization with extensive financial savings.

What’s in the Anesthesia Interface Suite?

- Outbound from MEDITECH: ADT, Allergies, Vitals, Labs, Scheduling, and Medications (administered and home).
- Direct launching point access between systems.

Continuous data exchange flows between the two systems, giving you access to information when and where you need it.

About Spectrum Medical

Spectrum Medical supplies anesthesia and perfusion solutions that are specifically designed and configured for the clinical specialty. Solutions include electronic medical record systems, comprehensive medical device connectivity, hardware, telemedicine, and reporting capabilities that are designed to complement MEDITECH. The new suite of anesthesia interfaces provides two-way communication of clinical and patient information to help ensure patient safety, quality of care, and efficiency of care.

Learn More

MEDITECH and Spectrum Medical are interested in working with sites now to arrange deployment of these anesthesia interfaces. For more information about pricing and product details, contact a MEDITECH (781-821-3000) or Spectrum Medical (800-265-2331 ext. 1) marketing consultant.
