

Arcadia & MEDITECH: Benefits Overview

MEDITECH is collaborating with Arcadia.io to broaden population health management by integrating information derived from an aggregated data asset. This data asset is comprised of claims and EHR data, and enables our customers to leverage key value-based care insights related to risk, care gaps, cost, and utilization. Using MEDITECH Expanse, including our Business and Clinical Analytics solution, you'll be able to effectively manage your patient populations — the healthy, the chronically ill, and everyone in-between — with more advanced care management tools and analytic insights.

and resource
utilization.

Tools to Succeed Under Risk

MEDITECH Expanse embeds Arcadia-supplied data elements, such as risk scores and gaps in care, into your care management workflows — a level of integration not commonly seen within the healthcare industry. Your clinicians will be armed with the complete picture of patient risk and utilization they need to better understand their populations.

These data elements also provide analytic insights to understand the construct and risk stratification of patient populations, as well as utilization of resources, costs, and related impact on achieving quality outcomes. This means you can make more effective decisions at the point of care, and you can more easily visualize and use data to guide your organization's population health strategy, financial success, and sustainability.
