Physicians have enough work to do; they don’t need any extra. An EHR should make their lives easier, go where they go, and help them to be more efficient while caring for patients. With MEDITECH Expanse, you will experience the benefits of a technology built by physicians, for physicians—with your needs in mind.

With challenges increasing for physicians, MEDITECH is taking the initiative to pioneer a new course for healthcare technology. We created the first post-meaningful use, fully mobile EHR. No other EHR vendor has undertaken a solution to eliminate the cumbersome workflows and administrative tasks burdening today's providers. With physician experience and efficiency at the center of our design, MEDITECH Expanse enables clinicians to practice medicine in a way that combats burnout, improves patient outcomes, and sets the stage for success in value-based care.

“I'M ABLE TO SEE AND INTERACT WITH OTHER PROVIDERS’ NOTES IN REAL TIME, WITHOUT HAVING TO SWITCH SYSTEMS, OR GO HUNTING FOR DATA. IT’S A HUGE TIMESAVER.”

John Tollerson, DO, CMIO, Kalispell Regional Medical Center
PROVIDE THE BEST CARE — NO MATTER WHERE YOU ARE

When we say MEDITECH’s EHR was made by physicians, for physicians, we mean it. We work directly with physicians from many different specialties, who are involved in the development and implementation of our products. With their help, MEDITECH Expanse is redefining physician efficiency with specialty care workflows, expert - and evidence-based standard content, and a more personalized experience through customizable widgets.

In addition, we’ve created a consistent user interface across the ambulatory, acute, and ED environments. These tools are browser - and touch-based and designed with the user navigation conventions that we’re all familiar with, so that anyone can use the solution right away. With just a tap, you can see your schedule, get test results, manage prescription requests, and much more. Even if your workflow gets interrupted or falls out of sequence, you can pick up right where you left off without losing any data. Usability and integration are at the core of our system. With MEDITECH Expanse, physicians get:

An intuitive patient list. See your complete, personalized schedule with one tap. Easily view and access patient charts from a single screen; monitor patient flow at a glance; and view tasks, messages, and more from across the continuum through one consolidated workload list.
Get the information you need, now. With a fixed reference panel on the side of your screen, you see all the important details from a patient’s record — no more time spent hunting for information. Select from a library of over 100 general widgets and specialty choices to define a layout that works best for you. You’ll save time through every step of the user experience.

Ordering as easy as using an online shopping cart. Place orders through user-defined favorites, order sets, protocols, or by selecting a medication from the formulary. Physicians can view medication suggestions based on the patient’s problem list, existing medication list, allergies, and demographics. Reconcile medications across the continuum for a complete snapshot of the patient’s medication history.

Document in a way that works best for you. Our documentation turns your burden into a breeze, with personalized workflows that include standard content templates, voice recognition, quick text, and typicals.
One patient record. For providers, this means universal access to the complete patient story across the continuum; all the right information is just a tap away, when and where you need it. Sharing of data between the practices, ED, and inpatient environments has a direct impact on the quality of patient safety and care, as well as time savings for physicians. Integration is the power of a single patient record across the continuum of care with our shared problem, allergy, and medication lists.

Accessible anytime, anywhere. Our mobile design works on any tablet, letting you see your patient’s record anytime you need it—whether you’re doing rounds in your office, or on the go. Review information with your patients to keep your focus on them, and not your computer. We’ve created a consistent user interface across the ambulatory, acute, and ED environments, so you have the same access to data no matter where you are. Physicians that practice in multiple places can tailor their workflows to each unique area, while keeping consistent views across care settings.

It’s the best of both worlds.
EMERGENCY DEPARTMENT

In the ED

For emergency room physicians, every second counts. MEDITECH Expanse saves time and guides prompt decision-making by presenting one complete patient record across acute, ED, and ambulatory environments — guaranteeing that providers have all the information they need at their fingertips. Physicians benefit from:

**Seamless patient handoffs.** MEDITECH’s intuitive sign out feature supports smooth patient handoffs every time. When care is transitioned from one emergency provider to another, they all see the complete patient story. View a list of patients awaiting providers from an interactive ED Tracker and tap to sign up.

**Clear visual indicators.** With a quick glance at the ED Tracker’s results indicator feed, you can see all the most important information about a patient’s status. Concise color-coded indicators help you instantly find what you need.
“WITH THE IMPLEMENTATION OF WEB ED, WE GAINED DIRECT LINKS TO PATIENT HISTORIES, RAPID TRENDING OF LAB DATA, EMBEDDED VOICE RECOGNITION OPTIONS FROM ANY DEVICE, INTUITIVE DATA ENTRY POINTS, AND NARRATIVE FORMATTING FOR EXCELLENT READABILITY. BY MAKING AN EHR MORE INTUITIVE AND WORKFLOW FRIENDLY, PATIENTS GET THEIR CARE FASTER.”

Louis Dandurand, MD, Northwestern Medical Center

Ready-to-go discharge data. The ED discharge process begins from the minute your patient steps into the emergency room. Recording information as you go, discharge information compiles throughout their visit.

Mobile design. MEDITECH Expanse is just what you need for the fast-paced emergency department. Easily switch between your tablet or laptop and pick up where you left off in your browser.

Predictive analytics. Alerts are embedded in the physician and care team workflows. Surveillance works in the background of your EHR, pushing real-time information to you as an early warning system. With additional details just a tap away, our integrated toolset fits smoothly into clinical workflows, helping care teams to prioritize care, take action sooner, and improve outcomes.
ACUTE CARE

In the Hospital

Just like ambulatory and ED clinicians, acute care providers using MEDITECH Expanse will find one centralized record of the patient’s story across the continuum. The integration and intuitive design will save time, increase staff efficiency, and — most importantly — improve patient care, with:

An embedded patient story panel. By involving physicians directly throughout the development process, we’ve designed easy-to-view functionalities that will work for you. You’ll have access to messages to communicate handoffs, an activity log sidebar in reverse chronological order, automatically expanded abnormal results, and comprehensive notes with a checklist. We’ve figured out the details, so you don’t have to.

Easy to use and safe browser-based functionality. With our electronic sticky notes function, you can enter notes with the safety and security of an electronic chart.

Easy for you, but still secure for patients.
AMBULATORY

In the Office

Ambulatory functionality is built into MEDITECH Expanse, and is designed specifically for the office setting with guidance from our own practicing physicians. With instant access to the complete patient record across the continuum and an intuitive design, physicians ultimately spend less time navigating their EHR and more time with their patients.

MEDITECH Expanse is optimized for specialty-specific workflow, with content supporting 40+ specialties, including women’s health/obstetrics and gynecology, general surgery, orthopedics, urology, and many more. Our web-based solutions are device- and browser-agnostic, and are designed for tablets and other touchscreen devices. Trade in your mouse clicks for a tap and a swipe. We break down barriers between providers and their patients, and help them deliver more efficient patient care through the following features:

Interactive protocols. Effectively manage health maintenance and disease management items with expert- and evidence-based protocols right from the patient chart. Take advantage of

“I LOVE THE PLATFORM. I USE A MOBILE DEVICE FOR PRETTY MUCH EVERYTHING I DO AND I LIKE THE LAYOUT OF THE WEB-BASED VERSION. IT’S APPEALING TO THE EYE. INTERACTING USING A TOUCHSCREEN DEFINITELY SEEMS TO MAKE IT MORE NATURAL DOCUMENTING AND INTERACTING WITH THE SOFTWARE.”

Jeffrey Schleich, MD, Family Practice Physician, FHN
standardized clinical decision support while personalizing patient care items you want to track for wellness and chronic conditions.

**Population health management.** With actionable Patient Registries, providers and their care teams can promote wellness and take a more proactive approach to disease management by identifying at risk or high cost patients, chronic disease trends, gaps in care, and overdue health maintenance. Include patient-generated health data for an even more complete picture.

**Integrated video visits.** Practice telemedicine by connecting with patients remotely using video visits embedded directly within the physician workflow.
“THE MEDITECH SYSTEM CONTAINS LOTS OF INNOVATION. THE TRACKER BRINGS ALL THE INFORMATION TO THE FOREFRONT. EVERYTHING IS VERY EASILY ACCESSIBLE. WE’RE AT THE BEDSIDE CHECKING ALL INTERACTIONS AND ALLERGIES, AND LOOKING UP PAST MEDICAL HISTORIES. WE’RE ABLE TO SHOW PATIENTS X-RAYS, THINGS THEY HAVEN’T EVER SEEN BEFORE AT THE BEDSIDE.”

Patrick Tupa, DO, Emergency Physician, Firelands Regional Medical Center
MEET MEDITECH

We don’t just make software; we facilitate better healthcare. MEDITECH Expanse connects every setting, enabling clinicians to provide higher quality care, with greater efficiency, to more people. After nearly five decades of growth and recognition, our company has never been more energized to build the next generation of EHR leaders.

85% of our customers have been with us for 10+ years
