Redefine Physician Productivity with MEDITECH
Executive Summary

Physician adoption of IT is considered one of healthcare’s biggest priorities, as demands on the industry continue to increase and evolve. Today, the majority of physicians report that they are using an EHR or plan to adopt one.

Providers need an intuitive EHR tailored to their needs, which will go wherever they go, and help them to work more efficiently. With MEDITECH’s Web EHR, users experience the benefits of technology specifically designed by physicians, for physicians.

“We train many physicians who’ve worked on other systems and without exception, they find **MEDITECH is much more intuitive**.”

David Kasting, MD, CMIO
Salinas Valley Memorial Healthcare System

---

Meet MEDITECH

With us, you’ll have the industry’s first complete, fully integrated web-based EHR at your fingertips. We’re no stranger to innovation, having persevered and grown over four decades after jumpstarting the HCIS industry with its very first electronic medical record. And we’re known for building partnerships that last — as 83% of our customers have been with MEDITECH for at least 10 years.

Our EHR is made for today’s physicians. And those physicians aren’t only in the US; they represent over 2,400 customer organizations across 22 countries worldwide.

The future of health IT can be seen today in MEDITECH’s 6.1 platform. A clinically-integrated, state-of-the-art healthcare solution, 6.1 is meeting the needs of large IDNs, small critical access hospitals, and everything in between.

For providers, 6.1 means universal access to the complete patient story across the continuum; all the right information is just a tap away, when and where you need it. For patients, it means your caregivers can focus all their attention on you, rather than their device.

6.1 will revolutionize the way your physicians work. The user-centered interface and intuitive design redefines productivity by saving time and increasing efficiency. Better still, it puts the Web EHR’s mobility in your hands.
Avera Health Case Study
Longtime MEDITECH customer Avera Health is moving forward with MEDITECH’s 6.1 Web EHR system for its fully integrated health network of over 300 locations across five states, including 33 hospitals, 208 clinics, and 23 long-term care, assisted living, and senior living facilities. Prior to their decision, they engineered a study between their current desktop system and the new 6.1 Web Ambulatory solution to compare productivity and efficiency between the two.

Desktop-based Solution
- 6,100 clicks per clinic day
- 4 hours spent

Tablet-based Web Ambulatory
- 2,140 taps/swipes per clinic day
- 1.5 hours spent

Savings
- 3,960 clicks per clinic day
- 2.5 hours saved

Focusing on Physicians
When we say our Web EHR was made by physicians, for physicians, we mean it. MEDITECH works directly with physicians from many different specialties, who are involved in the development and implementation of our products. With their help, the Web EHR is redefining physician productivity with specialty care workflows, standard content, and evidence-based medicine.

In addition, we’ve created a consistent user interface across the ambulatory, acute, and ED environments. These tools are browser-based and designed with the user navigation conventions that we’re all familiar with, so that anyone can use the solution with very minimal training. With just a tap, you can see your schedule, get test results, manage prescription requests, and much more. Even if your workflow gets interrupted or falls out of sequence, you can pick up right where you left off without losing any data. Usability, mobility, flexibility, speed, and integration are at the core of the system.
MEDITECH’s 6.1 Web Products Help Physicians Provide the Best Care — No Matter Where They Are

In the Office

Our Web Ambulatory solution is a fully integrated component of MEDITECH’s enterprise-wide Web EHR, designed specifically for the office setting with guidance from our own practicing physicians. With instant access to the complete patient record across the continuum and an intuitive design, physicians ultimately spend less time navigating their EHR and more time with their patients.

Web Ambulatory is optimized for specialty-specific workflow, with content supporting 40+ specialties, including women’s health/obstetrics and gynecology, general surgery, orthopedics, urology, and many more. Our web-based solutions are device- and browser-agnostic, and are designed for tablets and other touchscreen devices.

Trade in your mouse clicks for a tap and a swipe. Web Ambulatory breaks down barriers between caregivers and their patients, and helps them provide more efficient patient care through the following features:

An intuitive patient list. See your complete, personalized schedule with one tap. Easily view and access patient charts from a single screen, monitor patient flow throughout the practice environment at a glance, and view workload items from across the continuum through one consolidated list.
The information you need, now. With a fixed reference panel on the side of your screen, you see all the important details from a patient’s record — no more time spent hunting for patient information.

A chart designed for you. Select from a library of over 100 general widgets and specialty choices to define a layout that works best for you. You’ll save time through every step of the user experience.

See the whole picture. Trend real-time results through intuitive graphing capabilities.

“We found MEDITECH’s 6.1 platform to be the right fit for our organization... MEDITECH is one of the only EHR vendors we found that is truly integrated, and we believe a complete patient electronic record enables our clinicians to deliver safer patient care.”

Raphael Jaffrezic
CIO, Galway Clinic
Actionable Patient Registries. Our Patient Registries empower caregivers to stratify populations, cross-search for conditions, and take meaningful action — all from just one screen.

Ordering as easy as using an online shopping cart. Place orders through user-defined favorites, order sets, protocols, or by selecting a medication from the formulary. Physicians can view medication suggestions based on the patient’s problem list, existing medication list, allergies, and demographics, and reconcile medications across the continuum for a complete snapshot of the patient’s medication history.

An improved patient experience. Our Patient and Consumer Health Portal extends our EHR to the patient community and engages them with online access to prescription renewals, questionnaires, secure messaging, and direct appointment booking. Advance the evolution of care by empowering your patients to capture and share metrics from fitness trackers and wellness devices.
In the ED
For emergency room physicians, every second counts. MEDITECH’s Web ED saves time and guides timely decisions by presenting physicians with one complete patient record across acute, ED, and ambulatory environments, guaranteeing that they have all the information they need at their fingertips. Physicians benefit from:

**Seamless patient handoffs.** MEDITECH’s intuitive sign out feature supports smooth patient handoffs every time. When care is transitioned from one emergency provider to another, they all see the complete patient story. View a list of patients awaiting providers, and tap to sign up.

**At a glance.** With a quick glance at the status board’s results indicator feed, you can see all the most important information about a patient’s status. Concise color-coded indicators help you instantly find what you need.

**Simplified ordering.** Like our ambulatory solution, you’ll have ordering that is just as easy to manage as an online shopping cart.

**Ready to go.** The 6.1 ED discharge process begins from the minute your patient steps into the emergency room. Recording information as you go, discharge information compiles throughout their visit.

**And personalized.** Across the ambulatory, acute, and ED environments, “My Normals” and “My Typical Exam” can be customized to create a workflow that’s right for you.
Just like ambulatory and ED clinicians, acute care providers using MEDITECH’s Web EHR will find one centralized record of the patient’s story from across the continuum of care. The integration and intuitive design of 6.1 will save time, increase staff efficiency, and most importantly — improve patient care. You’ll have a fully integrated EHR that is:

**Designed by physicians, for physicians.** By involving physicians directly throughout the development process, we’ve designed easy-to-view functionalities that will work for you. You’ll have access to messages to communicate handoffs, an activity log sidebar in reverse chronological order, automatically expanded abnormal results, and comprehensive notes with a checklist. We’ve figured out the details, so you don’t have to.

**Accessible anytime, anywhere.** The Web EHR’s mobile design works on any tablet, letting you see your patient’s record anytime you need it. Review information whether you’re doing rounds, in your office, or on the go.

**Personalized for you.** With specialty-specific content and views, you’ll see the data that matters most to you. Instead of hunting around for information, viewing results is just a tap away.

**Easy to use and safely browser-based.** With our electronic sticky notes function, you can easily enter notes with the safety and security of an electronic chart. Easy for you, but secure for patients.
“MEDITECH’s Web Ambulatory product adds value to the patient experience. It shifts the clinician’s focus away from the computer system and back to the patient.”

**Stephen M. Cohen, MD**
MBA, FACS, FASCRS

“We have gone from multiple EHRs to one standard MEDITECH install across all of our hospitals. The resulting integration, standardization, and the elimination of a large number of interfaces has improved the continuity of care between our hospitals. The **flexibility** and the **functionality** in our MEDITECH EHR has improved efficiency in the delivery of care. **One patient, one chart** is what we were striving for, and **MEDITECH has helped us achieve that goal.”

**Jesse Diaz**
Vice President of IS and Clinical Informatics
Phoebe Putney Health System
Redefine Physician Productivity with MEDITECH

With our physician-centered development and design process, we’ve created a consistent user interface that does all the running around for you. Our integrated, mobile design works across ambulatory, acute, and ED environments. From simple to complex, no matter what your specialty, our Web EHR supports your diverse daily workflows.

With an intuitive mobile design, MEDITECH's Web EHR enhances the patient and provider experience while improving safety and outcomes. With just a tap of a screen, we can help your organization be at the forefront of healthcare technology. To see a demo of our Web EHR or Web Ambulatory solution, visit MEDITECH.com.
MEDITECH is bringing clinical sophistication and sustainability to today’s value-based healthcare model. We’ve redefined what an EHR can do for your patients and your productivity.
